

Formwork Handover Pack

Prepared 23 September 2026

Formwork is Adorable British College's school management system. It is a live website, not an installable program, so handing it over means transferring the accounts it runs on and the knowledge to keep it running.

What the school is receiving

The school receives a running system at **misform.work** and the accounts it runs on. As of 23 September 2026 it holds 275 current students, 62 staff, 1,526 parent records and 1,376 logins.

Part	What it does	Where it lives
Website	Every screen staff, parents and students use	Vercel (hosting)
Database and logins	All records, passwords, permissions and the rules that protect them	Supabase project <code>adorable_mis</code> , EU (Ireland) region
Code	The source for the website and the database changes	GitHub repo <code>classroomportal/adorable_mis</code>
Email sending	Welcome emails, behaviour alerts, messages to parents	Google Workspace account <code>mis@abc.sch.ng</code> , via a Supabase function
Report comment helper	AI drafting and checking of report comments	An outside AI provider, paid per use (see The AI report comment helper)
Domain	The <code>misform.work</code> web address	Domain registrar (to confirm)

The database can't be rebuilt from the code alone. Much of it was built directly on the live system, so the live Supabase project is the real asset. `sql/CURRENT_SCHEMA.md` in the repo describes it.

Accounts to transfer

Every account should end up owned by a school email address, such as `it@abc.sch.ng`, rather than a person. Nobody leaving should be able to lock the school out.

Account	Today	Transfer to	How
Supabase	Organisation "Adorable Maths", free plan	A new school-owned Supabase organisation on a paid plan	Supabase dashboard: Project settings → General → Transfer project. Logins and data move with it
Vercel	Personal account (to confirm)	A school Vercel team	Vercel: Project settings → Transfer. Environment variables move with it
GitHub	<code>classroomportal</code> organisation	A school GitHub organisation or account	GitHub: repo Settings → Transfer ownership

Account	Today	Transfer to	How
Google Workspace sender	mis@abc.sch.ng	Already the school's	Confirm an admin can reset it and the app password
AI provider	Personal key (to confirm)	A school account with the AI provider	Create a new API key and replace the old one in Vercel's environment variables
Domain misform.work	Registrar account (to confirm)	School registrar account	Registrar's domain transfer or account push. Keep DNS pointing at Vercel

Move Supabase off the free plan. Free projects have no downloadable backups and are paused after a week of inactivity, for example over a long holiday. The Pro plan costs about US\$25 a month and includes daily backups.

Keys and passwords to rotate

Replace every secret at handover. Don't pass on existing keys, and never send them by email or WhatsApp.

Secret	Where it is set	Used for	Action
EMAIL_APP_PASSWORD	Supabase → Edge Functions → Secrets	All outgoing email	Workspace admin issues a new app password; revoke the old one
EMAIL_SENDER (optional)	Supabase → Edge Functions → Secrets	Sender address, default mis@abc.sch.ng	Keep unless the address changes
AI provider API key	Vercel → Environment Variables	Report comment drafting and checking	New key from the school's AI provider account
Supabase database password	Supabase → Database settings	Direct database access only	Reset after transfer
Admin logins	Formwork /staff/roles	Full control of the system	Give admin to the new owners; remove the departing person's admin role

NEXT_PUBLIC_SUPABASE_URL and NEXT_PUBLIC_SUPABASE_ANON_KEY in Vercel are public by design and don't need rotating. Never put the Supabase **service role** key in Vercel or the code.

Things that run on their own

Several actions fire automatically, and some of them email real people. Whoever takes over should know these exist before testing anything on the live system.

Trigger	What happens	Who it reaches
A negative behaviour event of -4 points or worse, or a student's Sat-Fri weekly total reaching -8	Behaviour alert email	Every staff member with the smt or houseparent role

Trigger	What happens	Who it reaches
A student or staff record is given an email address	A login is created and a temporary password is emailed	That student or staff member
Every 15 minutes (scheduled job capture-register-alerts)	Registers not yet taken are recorded as alerts	Shown on Registers Not Done
A message sent from Comms	Email to the chosen parents or groups	Parents and staff
An admin runs the welcome-email pages	Login details emailed	The selected parents, staff or students

Never add test or practice records to the live system. A made-up negative behaviour event will email the senior team. Test in a separate Supabase project instead.

The AI report comment helper

Formwork uses an outside AI provider in two places, both in report writing. It only runs when a member of staff presses the button; nothing is sent automatically.

Where	What it does	What is sent to the AI provider
Write Subject Comments (/reports/write-subject-comments), draft button	Writes a 2–3 sentence draft comment into the teacher's comment box	The student's first name, the subject, effort grade, latest result, target grade and any notes the teacher has already typed
Check Reports (/reports/check), Run AI check	Flags spelling, grammar and tone problems, and comments that don't match the student's results; offers a corrected version for small fixes	Up to 60 submitted comments at a time, each with the student's first name and the same grades

- **Staff stay in control.** A draft is only saved when the teacher saves or submits it, and a suggested fix is only applied if the checker clicks it.
- **Minimal data leaves Formwork.** Surnames, dates of birth, photos, medical, behaviour and contact details are never sent.
- **The key stays private.** Requests go from Formwork's server, so the API key is never visible in staff browsers.
- **Nothing else depends on it.** If the key is removed or the account runs out of credit, these two buttons stop working and the rest of Formwork carries on.

The school should list the AI provider as a data processor in its NDPA records, since student first names and grades are sent to it.

Staff roles and what each can do

Access is set per role. An admin can change which screens each role sees at /admin/permissions and who holds which role at /staff/roles. **Only one login is currently a full system admin**, so name at least two admins at handover.

Role	Holders now	Main areas
teacher	51	Timetable, registers, behaviour log, results entry, subject report comments
mentor	32	Mentor group and pastoral report comments. Not editable from /staff/roles; change it in the database
houseparent	12	Boarding house students; receives behaviour alert emails
school_office	10	Student records, parent messages
admissions	7	New students and their records
pastoral	5	Detentions, appeals, registers not done, mentor groups, class allocation
smt	4	Whole-school overview, serious behaviour review, fees dashboard; receives behaviour alert emails
head_of_department	4	Their department's classes, results and class allocation
admin	3	Everything, including roles, permissions and imports
hr	3	Staff records
assessment_manager	2	Grade boundaries, target grades, CAT4/NGRT imports, report periods
assessment_user	1	Assessment data (view and entry)
nurse	1	Sick bay, screenings, immunisations, height and weight
bursar	1	Fees, discounts, payments, debtors
tuckshop	1	Tuckshop sales, top-ups, balances

Parents see their own children through the Parent Portal. Students see their own record through the Student Portal.

Data held, protection and backups

Formwork holds sensitive personal data about children, so the school becomes responsible for it at handover. The database is hosted by Supabase in Ireland (EU), which matters for Nigeria's data protection law (NDPA 2023).

What it holds:

- Student identity: names, dates of birth, photos, national identity numbers, state and LGA of origin, exam numbers (NECO, UTME)
- Medical: sick bay visits, screenings, immunisations, height and weight
- Behaviour, attendance, results, reports and assessment scores (CAT4, NGRT)
- Parent and guardian names, phone numbers and emails
- Fees, discounts, payments and tuckshop balances
- Staff records

How it is protected: every table has row-level security, so each login sees only what its role allows. All logins use individual passwords. Email goes out from the school's own Workspace account.

Known weak spots to fix:

- One database view (message_read_status) bypasses the security rules and can expose message recipients' email addresses to some staff
- Four fee functions can be called by any logged-in user and rely only on a check inside each function

Backups: on the current free plan there are **no downloadable backups**. After moving to Pro, turn on daily backups. Also take a manual export (pg_dump) at the end of each term and store it securely, encrypted and off the Supabase account.

Running costs

Expect roughly **US\$45–60 a month (about US\$550–700 a year)** once everything is on proper school-owned plans. Supabase and Vercel make up most of it.

Item	Plan needed	Cost (US\$)	Why
Supabase (database, logins, email function)	Pro	25 / month, plus usage above the included allowance	Free plan has no backups and pauses after 7 days with no activity. Pro adds daily backups kept for 7 days. source
Vercel (website hosting)	Pro, one seat	20 / month	The free Hobby plan is for personal, non-commercial use only; a school system needs Pro. source
Domain misform.work	Annual renewal	About 5–15 / year (approximate)	Renewal prices vary widely by registrar; check the current registrar's renewal price. source
AI provider (report comments)	Pay as you go	About 5–10 / month in report season, near 0 otherwise (estimate)	Charged at 2 per million input tokens and 10 per million output tokens. Around 8,000 comments a year works out at about 50 a year
Google Workspace (mis@abc.sch.ng)	Existing school account	0 if on Workspace for Education; 7 / month on Business Starter	Only one mailbox is needed. source
GitHub	Free	0	A free organisation is enough for one private repo

Prices checked 23 September 2026 from third-party pricing summaries; the vendors' own pricing pages were not reachable from here, so confirm each before budgeting. Costs are billed in US dollars, so card payments from Nigeria may carry foreign-exchange fees.

This excludes the cost of a person to maintain the system, which is usually the largest expense. See the open questions below.

Handover checklist

Work through these in order. The first three must be done before anything is transferred.

- ☐ Take a full database export (pg_dump) and store it securely
- ☐ Create a school-owned email for the accounts (e.g. it@abc.sch.ng)
- ☐ Name at least two school admins and give them the admin role in Formwork

- ☐ Create a school Supabase organisation on the Pro plan and transfer the project
- ☐ Turn on daily backups in Supabase
- ☐ Transfer the Vercel project to a school team
- ☐ Transfer the GitHub repo to a school account
- ☐ Move the `misform.work` domain into the school's registrar account
- ☐ Issue a new Gmail app password and set `EMAIL_APP_PASSWORD` in Supabase
- ☐ Set a new AI provider API key in Vercel from a school account
- ☐ Reset the Supabase database password
- ☐ Put a payment method on Supabase, Vercel, the AI provider and the domain
- ☐ Check login, a register, a behaviour alert and a parent email all still work
- ☐ Remove the departing person's admin role and account access
- ☐ Hand over `sql/CURRENT_SCHEMA.md` and `docs/project-update-summary.md` to whoever maintains it

Open questions for the school

- Who at the school owns Formwork day to day, and who is their deputy?
- Who fixes it when something breaks: an in-house person, a contractor, or the original developer on a support agreement?
- Who owns the code and rights to it? Put this in writing.
- Which budget pays the running costs (about US\$550–700 a year; see Running costs)?
- Who is the school's data protection lead for the NDPA?
- Is any training needed for staff, parents or students, and who delivers it?
